Conventional (Pesticide-based) Treatments vs. Heat Treatments Which is Right for You?

| Conventional Treatment Standard Bed Bug Control | Heat Treatment “Chaser Free” or “Chaser Plus” programs |
|--|--|
| <ul style="list-style-type: none"> • Significant preparation required for each treatment (2 hours for each treatment, up to 3 treatments!) • Two to Three visits for complete control • 6 Month Warranty, (including Two to Three Month “Active Treatment” phase) • Thorough application using residual products with long term effectiveness • Pesticide application prevents re-infestation • Service available at all locations | <ul style="list-style-type: none"> • Reduced preparation for the initial visit, very little follow-up. Prep and follow-up usually take about an hour • Immediate results at initial treatment • 3 Month Warranty with no “Active Treatment” phase. <i>Results are immediate.</i> • Pesticide Free (Chaser Free) or minimal pesticide use (Chaser Plus) , ideal for sensitive customers • Re-infestation risk can be greater without pesticide use (Chaser Free) • Services not available to all customers due to equipment logistics, call for details |

We’ve provided a basic comparison for you to begin making your decision. There are many factors that will affect your decision, chief among them being: warranty, immediacy, chemical sensitivity, preparation and price.

Consider these factors and consult with our staff to see which service plan meets your needs and how we can tailor our response to your situation.

We’ll get you and your family through this difficult time. You want this problem resolved, call us right now and find out which program is perfect for you!
